Base44 & Privacy

Roles

Base44 allows its users to create web-applications using vibe coding. For the purposes of creating an account on our platform and the use of it, Base44 collects information in accordance with our privacy policy, available here. Depending on the configuration and purpose of these web-applications, our users may collect information of their own application users. Processing of such information is in accordance with Base44's data processing agreement (DPA), available here.

Location of the Processing

Base44 processes personal information on your behalf in locations specified under its sub-processors list here.

Any transfer of data outside of the European Economic Area, UK, or Switzerland, is handled in compliance with the GDPR, using a permitted transfer mechanism under the applicable laws, including:

1. **Adequacy:** transfer to an adequate country
2. **SCC:** executing the pre-approved Standard Contractual Clauses
3. **DPF:** In accordance with the EU-US Data Privacy Framework (and its applicable extensions)

Base44 is an active participant under the Data Privacy Framework (and its extensions), for the purpose of collecting information from the European Economic Area, United Kingdom and Switzerland. More information can be found here.

The Sub-processor Management Process

Base44 uses other third-party service providers, known as sub-processors, to perform specific functions necessary for delivering our services (e.g., hosting, storage, and payment processing).

Our process for managing sub-processors, detailed in Section 3 of our DPA, ensures that customer data remains protected:

1. **Audits:** We conduct thorough checks to ensure that all sub-processors can meet the same high-level data protection and security standards that Base44 provides.
2. **Contractual Obligation:** We enter into written agreements with every sub-processor that impose the same data protection obligations required of Base44 under our DPA with our customers.
3. **Transparency:** Base44 maintains a public list of our current sub-processors and commits to notifying customers of any planned additions or replacements, allowing customers time to object if they have reasonable concerns.

Access and Deletion

Our users can contact us via compliance@base44.com to file a data subject request, and to request the deletion or access of their personal data, and even allows users to delete their own users data from the platform using the "Users" tab in the applications' dashboard.

Upon termination, or upon request, Base44 will, at the customer's choice, either return or delete all personal data processed on the customer's behalf in accordance with the DPA.

Protection of Personal Data

Base44 implements a set of technical and organizational security measures to protect data hosted on its platform, and enhance the privacy of its users. A list of such measures is available in our DPA, titled "Technical and Organizational Measures", and can be found here.

Periodic Testing

Base44 undergoes periodic testing of its security measures, including penetration tests, security audits by external auditors, and general compliance assessments, in order to provide our users with the best experience.
